RESEARCH EXPERIENCE

Master thesis development   2021
GLADIA Research Group, Sapienza University of Rome
   TITLE: *Human-Friendly Interpretation of a 3D Point Clouds Classifier*
   - Design and implementation of a novel 3D deep generative framework to reconstruct 3D point clouds via Adversarial Autoencoder;
   - Explanation of a deep neural model dealing with 3D data (PointNet) through a post-hoc technique to visualize what the artificial neural network has learned.

Bachelor thesis development   2019
MCLab Research Group, Sapienza University of Rome
   TITLE: *ModelsTranslator, a translating tool for biological models*
   - Analysis, design and development of a translating tool for biological models in several modelling languages to encourage models re-use in the community;
   - Test analysis and simulation of the translated models.

EDUCATION

MSc in Computer Science   2019 - 2021
Sapienza University of Rome   *(full marks with honors, GPA: $29,2$/30)*

   MAJOR TOPICS: Advanced Algorithms, Machine Learning, Deep Learning, Computer Vision and Natural Language Processing.

BSc in Computer Science   2016 - 2019
Sapienza University of Rome   *(full marks with honors, GPA: $27,2$/30)*

   MAJOR TOPICS: Algorithms, Software Engineering and Artificial Intelligence.

PROJECTS

Few-Shot Object Detection via an Instance-aware branch   2021
- Design and implementation of a novel approach to detect objects from few examples;

Towards Conditionality in Probabilistic Diffusion Models   2021
- Refine probabilistic diffusion models for image generation, including class conditionality by adapting GANs techniques.

Learning of Independent Causal Mechanisms on 3D Shapes   2021
- Training of a framework to learn several models each focused in inverting a transformation on 3D point clouds by leveraging causality;
- Build 3D point cloud MNIST dataset.

ACKNOWLEDGMENTS

Honours Programme in Computer Science   2021
Sapienza University of Rome
- Extracurricular activity for worthy students giving those the opportunity to approach the research;
- I focused my honours programme in discovering causal mechanisms on non-Euclidean data;
- Supervised by professor Emanuele Rodolà.

SUMMER SCHOOLS

Pre-Doctoral Research School   Aug. 2021
Cornell University, Maryland University, Max Planck Institute
   Admitted as an outstanding student to (virtually) attend a week of lectures about cutting-edge research topics in Computer Science.

Machine Learning Summer School   Aug. 2021
Max-Planck-Gesellschaft
   Selected to (virtually) participate in the General Program of the MLSS where leading experts in Machine Learning discuss core topics of the field.

SKILLS

Programming	**Python**, C++, Java, LaTeX
Technologies	PyTorch, common Python ML libraries
Environments	Visual Studio Code, PyCharm, Google Colab
